Work Experience

Software Engineer, Zuora – London, UK June 2023 – Present

Led critical architecture and implementation of Zuora's next-generation Product Catalog platform, focusing on microservices design and post-acquisition integration between Zephr and Zuora systems. Part of on-call rotation supporting production systems serving **1000+** enterprise customers.

- Architected Business Context Service and Entitlement Management System as foundational microservices for the Product Catalog, enabling dynamic pricing and conditional catalog visibility across multiple channels.
- Built Z-EMS to process **500K+** daily entitlement transactions with real-time access validation.
- Led technical integration between Zephr platform and Zuora Catalog following acquisition, serving as key technical contributor for platform convergence.
- Unlocked new dynamic pricing and product bundling capabilities that expanded revenue opportunities for clients.

Software Engineer, THG – Manchester, UK Oct 2021 – June 2023

- **Drove 15% reduction in checkout abandonment** through cross-functional collaboration with multiple internal teams. Owned end-to-end delivery of *Express Checkout* feature by gathering requirements, analyzing API integration constraints, and architecting cost-effective solutions. This feature increased checkout conversion from **60%** to **80%**, with Apple Pay integration further boosting conversion to **95%**.
- **Delivered 34% increase in add-to-basket rate** by migrating from resource-intensive WebView to native React Native product pages with GraphQL integration, significantly improving performance and user experience.
- **Architected and maintained microservices-based subscription platform** serving **1M+** monthly subscriptions across **20+** global clients. Built on Java Spring stack, the platform's scalable architecture enables rapid feature development and delivers industry-leading subscription experiences.

Software Engineer (Working Student), epap – Hanover, Germany Jan 2021 – Oct 2021

- Built B2B self-service platform enabling customers to manage epap solutions via web console. Established full-stack infrastructure using Flutter Web and Firebase, including sandbox and production environments with automated build-deployment pipelines linking Flutter builds to respective cloud environments.

Skills

Languages: Kotlin, Java, JavaScript/Typescript, SQL

Technologies: AWS, Docker, Gradle, Grafana, GraphQL, Jenkins, Kafka, Kubernetes, Linux, Maven, Node.js, RabbitMQ, ReactJS/Redux, React Native, Swagger

Education

Jacobs University, BS in Computer Science

- Thesis on "Centralized QR Code-Based Contact Tracing Solution"

Projects

TfL Pi - Smart Transport Display github.com/taiyrbegeyev/tfl-pi

- Engineered an IoT-powered real-time transport departure board integrating Raspberry Pi with e-paper display technology, delivering live tube and bus arrival data through automated system services.

BlueskySnap (blueskysnap.com) github.com/taiyrbegeyev/blueskysnap-bot & github.com/taiyrbegeyev/blueskysnap

- Built full-stack social media screenshot service for Bluesky platform, combining a Node.js/Puppeteer bot with Next.js web interface. Self-hosted on dedicated server with systemd timers for automated job scheduling, Docker containerization, and Grafana/Loki stack for monitoring and log visualization.
- **Tools Used:** Node.js, Puppeteer, Next.js, TypeScript, Docker, systemd, Grafana, Loki, Linux
